

**Amendments to the Claims:**

This listing of claims will replace all prior versions, and listings, of claims in the application:

**Listing of Claims:**

1. (Currently Amended) A method for creating a customized composition at an assembling web site, comprising the steps of:
  - receiving a request for a single composition composed of information from a plurality of different sources;
  - obtaining a reference to the information or retrieving the information from each of the plurality of different sources;
  - creating the single composition by including the reference or the retrieved information into a composition; and
  - storing using the single composition in a location associated with a user in such a manner that the single composition can be accessed via the identity of the user by a plurality of networked autonomous consumers, wherein the location is not a creation site for the composition.
2. (Original) The method as defined in claim 1, the obtaining step comprises obtaining a reference to information at a different web site.
3. (Original) The method as defined in claim 2, wherein information is generated dynamically at the different web site, when the web site is accessed.
4. (Original) The method as defined in claim 1, wherein each of a plurality of the different sources are on different web sites from said assembling web site.
5. (Original) The method as defined in claim 1, wherein the obtaining step comprises accessing at least two different web sites and retrieving information therefrom.
6. (Original) The method as defined in claim 5, wherein the obtaining step comprises correlating the input information and/or selections from the imaging client to the plurality of different sources.

7. (Original) The method as defined in claim 1, wherein the receiving a request step comprises serving up content including a user interface to a user's browser to allow the input of information and/or selections.
8. (Original) The method as defined in claim 1, wherein the single composition designates a reference and/or information from one of the different sources for a different location in the composition relative to the reference and/or information from another of the different sources.
9. (Original) The method as defined in claim 1, wherein at least one of the sources is a file.
10. (Currently Amended) The method as defined in claim 1, ~~the using step comprises~~ further comprising serving the composition to an imaging client.
11. (Currently Amended) The method as defined in claim 1, ~~wherein the using step comprises~~ further comprising printing the composition.
12. (Currently Amended) The method as defined in claim 1, ~~wherein the using step comprises~~ further comprising sending the composition by email to a designated web site.
13. (Cancelled).
14. (Currently Amended) A program product comprising computer readable code for causing a system to perform the following method steps to create a customized composition at an assembling web site:
  - receiving a request for a single composition composed of information from a plurality of different sources;
  - obtaining a reference to the information or retrieving the information from each of the plurality of different sources;
  - creating the single composition by including the reference or the retrieved information into a composition; and
  - storing using the single composition in a location associated with a user in such a manner that the single composition can be accessed via the identity of the user by a plurality

of networked autonomous consumers, wherein the location is not a creation site for the composition.

15. (Currently Amended) A system for creating a customized composition at an assembling web site, comprising:

a component for receiving a request for a single composition composed of information from a plurality of different sources;

a component for obtaining a reference to the information or retrieving the information from each of the plurality of different sources;

a component for creating the single composition by including the reference or the retrieved information into a composition; and

a component for storing using the single composition in a location associated with a user in such a manner that the single composition can be accessed via the identity of the user by a plurality of networked autonomous consumers, wherein the location is not a creation site for the composition.

16. (Cancelled).

17. (Cancelled).

18. (Currently Amended) A method for imaging data, comprising the steps of:

creating a graphic with internal graphic data relating thereto; and

providing remote web access to the internal graphic data in such a manner that the graphic can be accessed via the identity of a user by a plurality of networked autonomous consumers, wherein the location is not a creation site for the composition.
